English

# Mekanju Brilliant

## Full Stack Developer

As a passionate and dedicated full stack web developer, I'm Jolex, also known as Brilliant Makanju. At the age of 18, I embarked on my coding journey, and for the past three years, I've been honing my skills in Django, React, Next.js, MySQL, SQLite, Git, Python, and JavaScript (with some exposure to TypeScript). While I haven't had professional experience yet, I'm constantly expanding my knowledge and staying updated with the latest industry trends. When I'm not coding, you can find me immersed in gaming, particularly as a Call of Duty player, or conducting research to enhance my problem-solving abilities. Feel free to reach out to me via email at [brilliantmakanju5@gmail.com](mailto:brilliantmakanju5@gmail.com).

## Projects

### Twitter Clone

Tech Stack: Django-RestFramework, Next-Auth, Nextjs, Tailwindcss and MySql

My Twitter Clone is a full-stack web application built using Django, Next.js, NextAuth, Tailwind CSS, Vercel, Railway, and MySQL. It offers users a familiar Twitter-like experience by allowing them to create an account, post tweets, follow other users, and engage with content through liking and retweeting tweets. The application's sleek design and responsive layout enhance user interaction, while the robust backend infrastructure ensures seamless performance.

Demo: <https://twitter-frontend-clone.vercel.app>

### Blogging Website

Tech Stack: Nextjs and Tailwindcss

My Static Blog Website is a sleek and minimalist web application built using React and Tailwind CSS. While it focuses solely on the frontend aspect, it showcases a beautifully designed static blog. The website features a single post that demonstrates the layout and styling possibilities. Users can navigate through the post, read the content, and experience the seamless user interface. Although it doesn't include posting or authentication functionality, this Static Blog Website serves as a testament to my frontend development skills and design sensibilities.

### Educational Website Landing Page

Tech Stack: Nextjs, Framer-Motion and Tailwindcss

My Educational Website Landing Page is a captivating and informative web application developed using Next.js and Tailwind CSS. The landing page is designed to engage visitors with a visually appealing layout and incorporates scroll-on-view animations to create an interactive experience. As users navigate the page, content and graphics come to life, providing a seamless and engaging browsing experience. The website offers a glimpse into the educational resources and services available, inspiring visitors to explore further. With its modern design and attention-grabbing animations, this landing page showcases my expertise in front-end development and UI/UX design.
